

HAPO-Quality
Dent Repair Tool Systems
for
Paintless Dent Removal

The HAPO Dent Repair tools are designed to remove small dents in car bodies in just a few minutes, without filling or re-painting.

With the special HAPO tools the metal in the dent area is gently brought back to its original state. This process does not damage the paint !

Parking dents, hail damages etc can now be repaired efficiently with the HAPO Dent Repair tools. Although primarily designed for Paintless Dent Removal, the HAPO tools are frequently used in traditional body repair jobs, especially if the damaged area is hard to reach.

The HAPO tools not only enable you to reduce costs, but also to generate a higher turnover and to improve margins :

- Quick and cost-effective repair of small dents in new cars.
- Reconditioning of trade-ins at low cost
- Cost savings in traditional body repair jobs, especially in hard to reach areas
- Extra turnover as customers now face lower repair costs for minor damages
- Minimum operating costs
- Possibility of incremental turnover of hail damage repairs via insurance companies.

The HAPO Dent Repair tools are sound investments, that pay off after just a few repairs.

Hands-on training programs are offered by the HAPO Quality dealers in Europe to ensure that you fully exploit the unique advantages of professional dent repair with the HAPO Quality tools. The trainee receives a HAPO-Certificate if he has met all the criteria.

More details ?

Should you need additional information, please contact your local dealer. He will be pleased to arrange a demonstration of the HAPO Quality system, so you can convince yourself that perfect results can be obtained.

Fluorescent Lights

To determine the exact location of the tool under the panel and to guide the repair job, you will make use of two reflection lines on the panel. HAPO supplies a range of fluorescent lights, that can create such reflection lines.
